Education

Indian Institute of Information Technology (IIIT) Manipur

Bachelor of Technology in Electronics and Communication Engineering

Senapati, Manipur

Nov. 2022 – May 2026

Narayana Junior College

MPC (Intermediate / Class 12)

Andhra Pradesh, India

Class of 2022

Narayana School

SSC (10th Standard)

Andhra Pradesh, India

Class of 2020

Technical Skills

Programming Languages: Python, SQL (PostgreSQL, SQLite, MySQL), HTML/CSS

Libraries & Frameworks: Pandas, NumPy, Scikit-Learn, Seaborn, Matplotlib, NLTK

Tools & Platforms: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), Git, GitHub, pgAdmin, Jupyter Notebooks, VS Code

Data Methodologies & Concepts: Relational Database Design, ETL/ELT Pipeline Automation, Cohort Retention Analysis, Customer Lifetime Value (CLV), Predictive Modeling, Data Wrangling & Cleaning, Descriptive & Statistical Analysis

Experience

AI Benchmark & Evaluation Developer – Freelance

July 2026 – Present

Airdaws

Remote

- Evaluate and benchmark advanced Large Language Models (LLMs) and AI agents across real-world software engineering tasks, focusing on reasoning quality, code reliability, execution accuracy, and reproducibility.
- Design challenging coding benchmarks with detailed technical specifications, deterministic evaluation criteria, oracle solutions, automated test suites, and scoring workflows.
- Build reproducible Docker-based environments with pinned dependencies and deterministic validation pipelines for consistent and reliable model evaluation.
- Analyze AI-generated solutions to identify failure patterns involving instruction following, reasoning errors, edge cases, invalid inputs, state consistency, and execution behavior.
- Diagnose benchmark and execution failures across Python, Go, Java, Bash, Git, Docker, and Linux environments using automated and oracle-based validation.
- Incorporate reviewer feedback to improve benchmark fairness, difficulty, reproducibility, and resistance to hardcoded or non-generalizable solutions.

Projects

SQL E-Commerce Business Analytics | PostgreSQL, SQL

- Designed and loaded a multi-table PostgreSQL database simulating e-commerce transaction histories with custom constraints.
- Optimized SQL queries using CTEs, window functions (LEAD, LAG, DENSE_RANK), and self-joins to analyze monthly growth and cohort retention.
- Identified product categories with 40%+ repeat purchase rates to support marketing and inventory decisions through business KPI models.

Customer Churn Analytics & Predictive Modeling | Python, Pandas, Scikit-Learn, Seaborn

- Performed exploratory data analysis on a 1,000-customer dataset to identify patterns associated with customer cancellations.
- Engineered and scaled features, then compared Logistic Regression and Random Forest models to achieve 88.0% prediction accuracy.
- Analyzed feature importance and found contract terms and subscription tenure to be the strongest retention indicators.

End-to-End Cloud Data Pipeline Simulation | Python, SQLite, BigQuery, SQL

- Built an automated Python pipeline to ingest real-time market asset data through an API.
- Loaded data into a SQLite/BigQuery-style warehouse and applied dbt-style CTE transformations for cleaning, partitioning, and market analysis.
- Developed an automated reporting dashboard script to present live data metrics.

Certifications

SQL Advanced (HackerRank), Python Intermediate (HackerRank), Complete Data Analyst Bootcamp (Udemy), Deep Learning (NPTEL), Joy of Computing Using Python (NPTEL), Digital Image Processing (NPTEL)
