Education

Indian Institute of Information Technology (IIIT) Manipur

Bachelor of Technology in Electronics and Communication Engineering

Senapati, Manipur

Nov. 2022 – May 2026

Narayana Junior College

MPC (Intermediate / Class 12)

Andhra Pradesh, India

Class of 2022

Narayana School

SSC (10th Standard)

Andhra Pradesh, India

Class of 2020

Technical Skills

Programming Languages: Python, SQL (PostgreSQL, SQLite, MySQL), HTML/CSS

Libraries & Frameworks: Pandas, NumPy, Scikit-Learn, Seaborn, Matplotlib, NLTK

Tools & Platforms: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), Git, GitHub, pgAdmin, Jupyter Notebooks, VS Code

Data Methodologies & Concepts: Relational Database Design, ETL/ELT Pipeline Automation, Cohort Retention Analysis, Customer Lifetime Value (CLV) Calculation, Predictive Modeling, Data Wrangling & Cleaning, Descriptive & Statistical Analysis

Projects

SQL E-Commerce Business Analytics | *PostgreSQL, SQL*

- Designed and loaded a multi-table relational database (PostgreSQL) simulating e-commerce transaction histories with custom constraints
- Optimized complex SQL queries using CTEs, window functions (LEAD, LAG, DENSE_RANK), and self-joins to track monthly growth and customer cohort retention
- Identified high-value product categories with 40%+ repeat purchase rates to guide targeted marketing and inventory replenishment strategies, translating database schemas into business KPI models

Customer Churn Analytics & Predictive Modeling | *Python, Pandas, Scikit-Learn, Seaborn*

- Conducted exploratory data analysis (EDA) on a 1,000-customer dataset using Python (Pandas, Seaborn) to identify patterns driving customer cancellation rates
- Engineered and scaled features, then trained and compared Logistic Regression and Random Forest Classifiers to achieve 88.0% prediction accuracy
- Analyzed feature importances to reveal that contract terms and subscription tenure were the primary retention indicators

End-to-End Cloud Data Pipeline Simulation | *Python, SQLite, BigQuery, SQL*

- Architected an automated data pipeline using Python to ingest real-time market assets via API
- Configured and loaded streaming records into a local data warehouse (SQLite / BigQuery simulation), executing dbt-style CTE SQL transformations to clean, partition, and model market cap tiers and volume-to-market-cap ratios
- Built an automated reporting dashboard script to showcase live data metrics

Certifications

SQL Advanced (HackerRank), Python Intermediate (HackerRank), Complete Data Analyst Bootcamp (Udemy, In Progress), Deep Learning (NPTEL), Joy of Computing Using Python (NPTEL), Digital Image Processing (NPTEL).
